

IGOR ASSMAR BRIZACK FERREIRA

Fullstack Developer

Lauro de Freitas, BA, Brazil | igor_brizack@hotmail.com | +55 71 99231-9946

PROFESSIONAL SUMMARY

Full Stack Developer with 3+ years of experience designing and building scalable APIs, serverless applications, and distributed systems using Go, Python, and TypeScript. Strong background in AWS infrastructure (Lambda, SQS, SNS, ECS, RDS), microservices, and messaging pipelines. Focused on performance, reliability, and clean architecture. Experienced in building data pipelines, web scrapers, and automation systems. Continuously interested in scalability, observability, and developer productivity.

TECHNICAL SKILLS

- **Languages:** Go, TypeScript, Python, JavaScript
- **Frontend:** React, Next.js, Angular
- **Backend:** FastAPI, Node.js, NestJS, REST APIs, GraphQL
- **Cloud & DevOps:** AWS (Lambda, SQS, SNS, ECS, EC2, S3, RDS, CloudFormation), Docker, Terraform, CI/CD
- **Observability:** Grafana, Prometheus, Loki, Tempo, OpenTelemetry
- **Databases:** PostgreSQL, MySQL, TimeStream
- **Architecture:** Microservices, Serverless, Clean Architecture, Distributed Systems
- **Other:** Web Scraping, Crawlers, Unit Testing, Git, Agile

PROFESSIONAL EXPERIENCE

Fullstack Developer | LEDAX Energia

Sep 2023 – Present

- Designed and implemented scalable REST APIs and microservices using FastAPI and Go.
- Led the creation of the EnergiQ Hub platform, a B2B2B energy management solution.
- Implemented CI/CD pipelines with integration and unit tests, reducing regressions in production.
- Developed data pipelines and crawlers for automated data collection.
- Built serverless solutions with AWS Lambda, SQS, and SNS for asynchronous processing.
- Implemented authentication and authorization (JWT, scopes) and database integrations.
- Improved system performance and reliability through optimizations and architectural decisions.
- Contributed to frontend development with React and TypeScript.

Fullstack Developer | Smartrips

Apr 2024 – Nov 2024

- Maintained and improved the performance and scalability of the web platform.
- Refactored legacy systems with a focus on maintainability and efficiency.
- Integrated GraphQL APIs and improved data flow between services.
- Used Docker and CI/CD pipelines for consistent deployments.
- Boosted team productivity through reusable components and tooling.

PROJECTS

- **Messaging Systems and Data Pipelines:** Development of scalable asynchronous crawlers and pipelines with Go, Python, and AWS.
- **Serverless Applications:** Event-driven systems using AWS Lambda, SQS, and SNS.
- **Microservices Architecture:** Distributed services with clean architecture and REST APIs.

EDUCATION

Fullstack Development Program – Trybe (2022 – 2023)

Bachelor's Degree in Civil Engineering – Wyden Área 1 (2013 – 2019)
